Consumer Behavior Analysis of Online Shopping Among Students

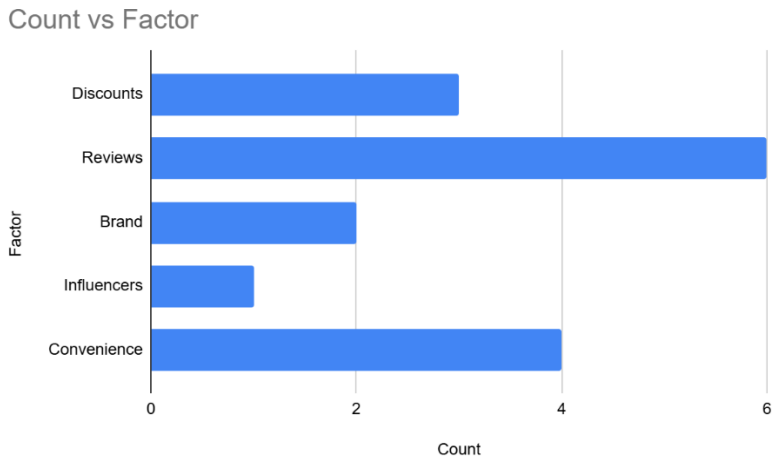
OBJECTIVE

To understand online shopping behavior, preferences, and key purchase drivers among students.

METHODOLOGY

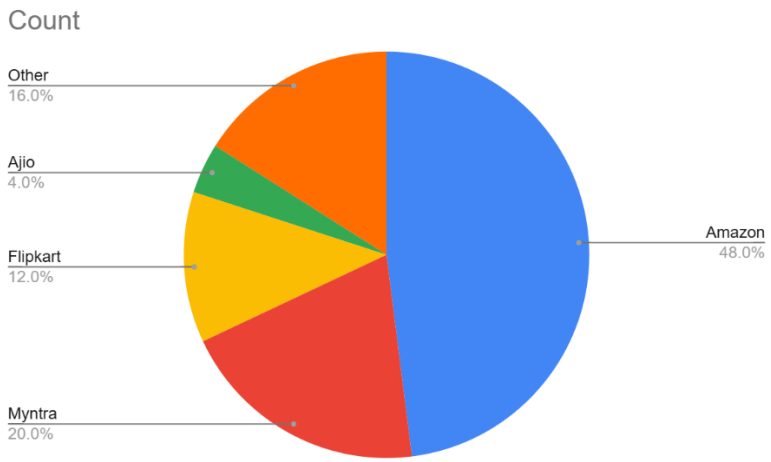
A survey was conducted among 16 students using a structured questionnaire. The data was analyzed using spreadsheets and visualized through charts.

FINDINGS & INSIGHTS



Purchase Influence Analysis:

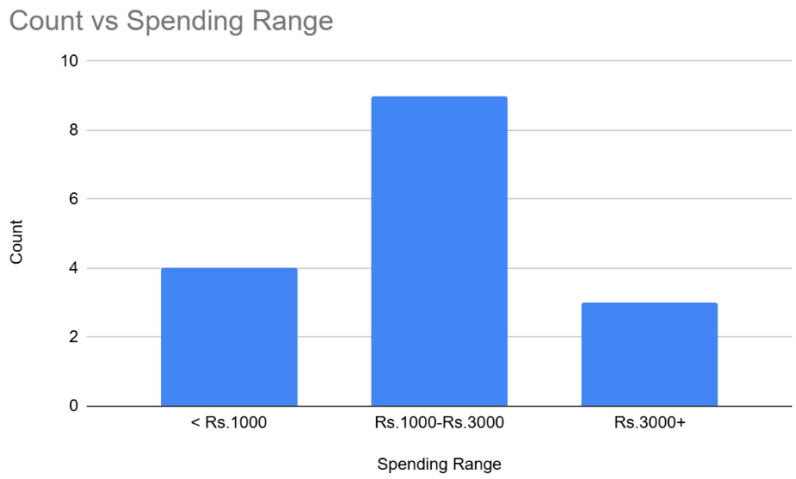
The majority of students are influenced by reviews when making online purchases, indicating that trust and feedback from other users play a significant role in decision-making. Convenience and discounts also influence purchasing decisions, while brand loyalty and influencer impact appear to be less significant among students.



Preferred Platforms Analysis :

The chart indicates that Amazon is the most preferred platform among students for online shopping. Platforms such as Ajio and Flipkart appear to be less popular in comparison, suggesting a lower level of usage among the surveyed group.

Spending Range Analysis :



The data indicates that most students fall within the ₹1000–₹3000 spending range for online purchases, suggesting a preference for moderately priced products that balance affordability and value.

RECOMMENDATIONS

1. Businesses should focus on **mid-range pricing strategies** to align with student spending patterns
2. Offering **discounts and promotional deals** can further influence purchase decisions
3. Highlighting **customer reviews** can build trust and increase conversions
4. Ensuring a **convenient and seamless shopping experience** can enhance user engagement
